

Your Hybrid solution
for **Sintering & Milling**

Make
MILL &

Power and Simplicity in a single product

Make&Mill is the MillBox add-on module that enables you to combine additive and subtractive manufacturing - all within a single application and through a single interface. The software provides multiple benefits including optimized processing times and repeatable accuracy of produced parts. It guides you through the nesting process for your sintering machine and produces toolpaths for refining restorations on your mill.

Precise management of material profiles on your sintering machines ensures you are printing properly scaled parts. On the milling side, all machining parameters are customizable to facilitate the best fit and finish.

Moreover, Make&Mill is perfectly integrated with our **3D printing** technology so that you can easily combine the quickness and cost effectiveness of 3D printing with the precision of the milling process and execute all the steps all the steps of your dental manufacturing project in just few steps.

No matter the level of your work's complexity, Make&Mill boosts productivity!

BENEFITS

Why choose **Make&Mill**?

FASTER

Thanks to a singular workflow Make&Mill produces quality parts faster than ever before.

LEARNING CURVE

Training times for new operators are significantly reduced.

MORE FLEXIBLE

Highly customizable - by restoration type, material profile, and milling strategy.

SMARTER

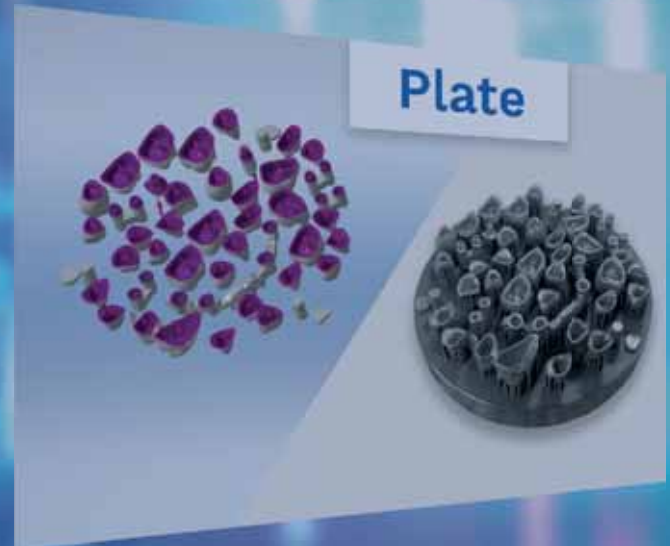

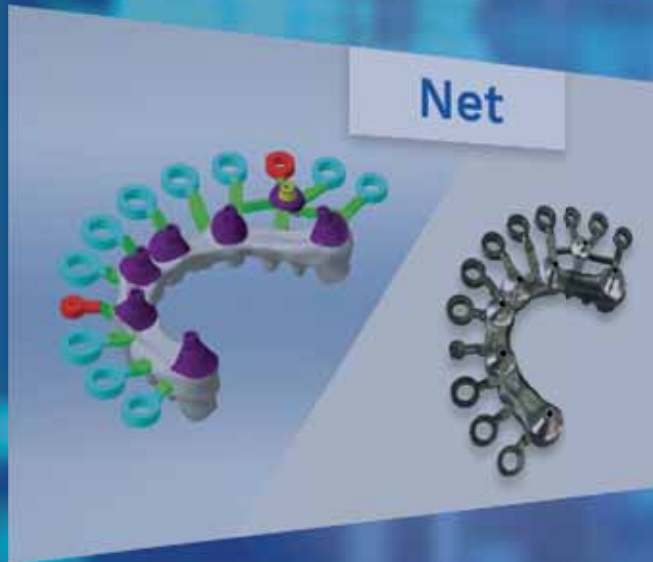

Thanks to Artificial Intelligence, many operations are performed automatically, saving you time and increasing machining accuracy.

CHEAPER

Make&Mill drastically minimizes your tool and material consumption without adding extra machining time.

Main features

Get a closer look at some of the things that Make&Mill can do **for you**

- ✓ EASY ADDITION OF PARTS
- ✓ AUTOMATIC IMPLANT RECOGNITION
- ✓ PERFECT MILLING ON BOTH SIDES OF THE OBJECT AND BY PLATE
- ✓ SIMPLE SUPPORT PLACEMENT AND EASY CALIBRATION
- ✓ OPEN IMPLANT CONNECTION LIBRARY
- ✓ CUSTOM TOOLPATHS
